

Most of us have jobs that require repetitive tasks.

Whether you are an office employee that types in front of a computer screen all day, a grocery checker who is continuously scanning bar codes or a construction worker who is always twisting a screwdriver, these repetitive motions are an important part of your everyday job duties.

For some, the continual stress of these repetitive motions can lead to inflammation, pain, and even the inability to perform usual tasks. Fortunately, you don't have to delay medical care for your discomfort. What many employees don't realize is that workers' compensation may cover care for your repetitive stress injuries.

Workers' Compensation May Cover Your Repetitive Stress Injuries

There are many different repetitive stress injuries that can be covered by workers' compensation in New York. Here are a few of the different types of injuries that we work with at our office.

Inflammation of muscles, tendons or nerves caused by repeated bending, pushing, pulling, squatting, turning, standing, sitting or lifting.

Carpal tunnel syndrome and other similar conditions that stem from typing, clicking, squeezing, pinching, shaking or twisting.

Neck, shoulder, back and rotator cuff pain caused by repeated head or upper torso movement.

Numbness, tingling, burning sensations, itching or other discomfort related to continuous motion or stress.

How Can Our Workers' Compensation Attorneys Help?

At Pyrros & Serres, LLP, our lawyers have extensive experience in the field of workers' compensation law and claims. We can help you get the medical attention you need and ensure that your workers' compensation claim is processed correctly so that you receive maximum compensation.

If you have any questions about whether or not your repetitive stress injury qualifies for workers' compensation, visit our website or give us a call at 718-804-5430.
